Predictive Services Discussion:

A drier southwesterly flow will continue across the Inland Northwest into northern California and the western Great Basin amid above normal temperatures. Breezy and dry southwest winds of 12-20 mph with gusts 20-35 mph amid relative humidity of 8-20% will develop across these areas creating locally elevated conditions, strongest through the Cascade gaps, in northern California, and along the Sierra Front. Isolated dry thunderstorms will develop this morning across southeast Washington into the Idaho Panhandle, with isolated to scattered mixed wet and dry thunderstorms developing in the afternoon across northeast Nevada into central Idaho, far northeast Oregon, western Montana, and western Wyoming. Farther south, isolated to scattered mainly wet thunderstorms will develop in Arizona, western New Mexico, eastern Great Basin, and Colorado Rockies.

Dry and hot southerly flow will increase across the southern Plains with winds of 10-20 mph gusting to 20-30 mph amid minimum relative humidity of 10-25%. Scattered showers and thunderstorms are likely in the northern Plains through the Great Lakes to the Northeast behind a cold front, with strong, but moist northerly winds across the central Plains behind the front. Heavy rain, strong winds, and flooding are likely from north Florida into Georgia and South Carolina due to Hurricane Debby, with storm surge flooding in northwest Florida as well.
