Predictive Services Discussion:

Strong south to southwest sustained winds of 15-30 mph with gusts 30-50 mph amid relative humidity of 5-20% will develop across eastern Oregon into northeast California, southwest Idaho, and much of Nevada in the afternoon. However, areas west of the Cascade Crest will remain moister with lighter winds in the afternoon, followed by scattered to widespread showers and thunderstorms overnight. Heavy rain will occur with a few of the thunderstorms west of the crest, with debris flows possible on recent burn scars. Monsoon moisture will increase in Arizona, Utah, West Slope, and New Mexico, west of the Divide, with scattered mainly wet thunderstorms developing, possibly extending into east-central Nevada as well. However, isolated to scattered fast-moving mixed wet and dry thunderstorms will develop in northeast Nevada into southeast Idaho with potential new ignitions.

New Mexico into much of Texas and Oklahoma will remain hot, with temperatures of 95-110°F in the afternoon amid relative humidity of 12-25%. Isolated mixed wet and dry thunderstorms are possible in the Texas Panhandle and western Oklahoma are likely to produce new ignitions. A cold front will move into the Northeast, Appalachians, and Southeast for scattered showers and thunderstorms. Hot, dry and windy conditions are expected across eastern Interior Alaska as downslope Chinook winds gust to 60 mph in favored locations.
