Predictive Services Discussion:

Breezy and dry southwesterly winds amid RH of 3-15% and poor overnight recovery will continue across much of the Sierra Front into central/eastern Nevada, southern/central Idaho, Wyoming, and western Utah. The strongest winds are likely to shift eastward tomorrow with gusts of 30-50 mph possible in western Utah into much of Wyoming. High-risk significant potential is most likely in eastern Nevada into southern Idaho and western Wyoming where fuels are driest, while low potential remains in Utah due to recent precipitation. However, a few holdovers may emerge in Utah from the windy/dry conditions.

Winds will be lighter in the Northwest into northern California as well, with temperatures near to below normal and RH above 20%, including inland areas. Another surge of monsoon moisture will move into Arizona with scattered to widespread wet thunderstorms. Isolated mixed wet/dry thunderstorms will continue across the southeastern half of Utah into the West Slope. Isolated to scattered wet/dry thunderstorms will continue across Montana as well, with increased initial attack likely to continue.
