## **Predictive Services Discussion:**

South to southwest winds of 15-30 mph with gusts of 30 to 50 mph amid relative humidity of 5-20% are expected across much of the Great Basin today. Above normal temperatures and minimum relative humidity below 25 percent are likely to continue east of the Divide in the Southwest into the Southern Plains. Mixed wet/dry storms are forecast east of the Cascades in the Northwest eastward into parts of the Northern Rockies. Showers will persist from the Cascades westward, with snow possible above 8,000 feet, along with cooler temperatures and high humidity providing continued relief. Monsoon moisture will continue to prevail across Arizona, the southeastern Great Basin, New Mexico west of the Divide, and Colorado for scattered to widespread wet thunderstorms.

Temperatures in the southern Plains will remain above normal with afternoon relative humidity as low as 15% and southerly winds of 12-20 mph and gusts 20-25. In addition, slightly increased moisture in central Texas will lead to isolated to scattered mixed wet and dry thunderstorms for likely new ignitions. In the Deep South, very dry conditions with relative humidity as low as 30% will continue. Dry air will remain in place across the Appalachians and Ohio Valley with temperatures warming to above normal levels.
