## Predictive Services Discussion:

Hot temperatures will continue across the West, with record highs possible for the Inland Northwest into the Great Basin. Very low relative humidity of $3-15 \%$ will continue for the Inland Northwest, much of California, Great Basin, West Slope, and Southwest, west of the Divide with poor overnight recovery of 10-30\%. Unstable conditions are expected on the east slopes of the Cascades today due to a thermal trough. Breezy westerly winds creating elevated conditions are also expected along the east slopes of the Sierra into portions of the Mojave Desert late in the afternoon and evening. Isolated mixed wet and dry thunderstorms are likely in southeast Arizona and near the Divide in Montana and Wyoming, with wetter thunderstorms possible in New Mexico, especially near and east of the Divide.

Beryl will continue to move north and east through the Mid-Mississippi Valley into the southern Great Lakes, becoming post-tropical during the day. Heavy rain and localized flooding are likely along its track. Meanwhile, isolated to scattered thunderstorms will continue across south Texas into the Southeast, Mid-Atlantic, and Northeast. Wet conditions will return to western Alaska, with southerly downslope winds expected off the Alaska Range into the eastern Interior.

## National Predictive Services Outlook

## 6 Minutes for Safety:

The 6 Minutes for Safety topic of the day is Valley Fever.
