## Predictive Services Discussion:

Strong high-pressure centered over the western Great Basin will continue to bring very hot and critically dry conditions to much of the interior western US on Wednesday as it slowly begins to shift eastward. Well-above normal temperatures combined with relative humidities in the single digits to lower teens are expected across multiple geographic areas. Nighttime relative humidity recovery will also be quite poor, especially across the Great Basin. Locally breezy winds are expected across parts of the Inland Northwest, including gusty winds through the Cascade Gaps.

Elsewhere, mainly hot and dry weather will persist west of the Continental Divide in the Southwest while the coverage of wetting showers and thunderstorms gradually increases from eastern Arizona into New Mexico. The remnants of Beryl will continue to move along a cold front through the Great Lakes and Northeast with heavy rainfall, while isolated thunderstorms continue well ahead of the front across the Southeast and MidAtlantic, although most areas will receive little to no rainfall.

Most of mainland Alaska has received several bouts of wetting rain over the last several days; however, temperatures will warm back closer to seasonal normal with generally dry weather for the interior.

## National Predictive Services Outlook

## 6 Minutes for Safety:

The 6 Minutes for Safety topic of the day is Thirtymile Fire (Washington) - July 10, 2001
