## Predictive Services Discussion:

A wave off the California coast will move into the Oregon Cascades tonight triggering isolated mixed wet and dry thunderstorms over far northern California and southwest Oregon that will continue overnight from central Oregon westward to the coast. Breezy and dry southwesterly winds are also forecast for portions of northern California as well. Farther east, isolated mixed wet and dry thunderstorms will develop over much of the Great Basin, with wetter thunderstorms over the eastern Great Basin into Wyoming, the West Slope, and Southwest. Well above normal temperatures are forecast for the Northwest through central/western Montana, with afternoon relative humidity below $20 \%$ east of the Cascade Crest. Cooler temperatures are forecast for eastern Montana and the northern High Plains south to the Colorado Front Range behind a cold front.

Above normal temperatures are forecast from the southern Plains into the Southeast and Mid-Atlantic, with records possible in the Mid-Atlantic. Breezy westerly downslope winds are also possible in portions of central Virginia and Maryland. Scattered showers and thunderstorms will develop ahead of a cold front from the Front Range into the eastern Great Lakes, Ohio Valley, and Northeast. Cool and wet conditions continue for Alaska, while dry trade winds in Hawai'i decrease to light to moderate during the day.

## National Predictive Services Outlook

## 6 Minutes for Safety:

The 6 Minutes for Safety topic of the day is Firefighter Nutrition.
