## Predictive Services Discussion:

Hot, well above normal temperatures will continue in the Northwest into much of Idaho and central/western Montana with minimum relative humidity of $7-20 \%$ and poor overnight recovery. Isolated dry thunderstorms are likely to be ongoing near in northwest Oregon and southwest Washington in the morning before dissipating. Isolated to scattered mixed wet and dry thunderstorms will redevelop in the afternoon across much of central and eastern Washington, including the Cascades, and northeast Oregon then move into central Idaho, Idaho Panhandle, and western Montana during the evening, possibly continuing overnight. Westerly winds gusting to 30 mph will develop east of the Cascades in the afternoon as well.

Scattered mainly wet thunderstorms are expected in the Southwest and central Rockies due to abundant moisture from the monsoon and moisture moving westward. However, on the western periphery of the moisture, isolated mixed wet and dry thunderstorms are possible in eastern Nevada and southwest Idaho into much of Utah as drier air moves into the Great Basin. Much cooler air will move south through much of the Plains behind a cold front, while scattered to widespread showers and thunderstorms develop along and ahead of the front from Oklahoma through the Ohio/Tennessee Valleys and Mid-Atlantic. Cool and moist conditions will continue in Alaska, with lighter, but dry, trade winds expected in Hawai'i.
