## Predictive Services Discussion:

Hot, record-setting temperatures with low afternoon relative humidity below $20 \%$ are expected across the Northwest, northern and western Great Basin, and northern Rockies. Hot, well above normal temperatures will extend into California as well. Poor overnight recovery will continue, with areas below $30 \%$ for mid-slopes and ridges. Unstable low-level conditions are likely along the east slopes of the Cascades into northeast Oregon due to an intense thermal trough. Isolated mixed wet and dry thunderstorms are likely for portions of the central and western Great Basin, northeast California, south-central Oregon, and southwest Montana, with the driest storms along the Sierra Front into south-central Oregon. Isolated dry thunderstorms will develop overnight from south-central Oregon to the coast overnight and move northward along the Cascades and the coast.

Deeper monsoon moisture will bring scattered wet thunderstorms to much of the Southwest and central Rockies, except southwest Arizona and the Mojave Desert will remain drier with near-record temperatures. Scattered to widespread showers and thunderstorms will develop along a stalled front from the Lower Mississippi Valley to the Southeast coast, with scattered showers and thunderstorms expected across the southern Plains to the Upper Mississippi Valley as well. Cool and dry conditions will continue across much of the Great Lakes and Northeast with light winds. Mainland Alaska will see a warming trend, with well above normal temperatures expected along with isolated wet thunderstorms over south-central Alaska and the southeast Interior.
