## Predictive Services Discussion:

Isolated, mainly dry thunderstorms are likely from eastern Oregon through the much of Idaho and into portions of northwest Nevada and southwest Idaho Monday. This will come on the heels of well above to record-setting temperatures for multiple days. Hot, well above normal temperatures will continue across much of the Inland Northwest, northern California, northern Great Basin, and northern Rockies, with thermal troughing in central and northern California and from the central Great Basin through the northern Rockies. West-northwest winds will increase along and east of the Cascades Monday, especially in the Cascades Gaps and just downstream, with gusts of $30-35 \mathrm{mph}$ possible. However, temperatures will cool and relative humidity increases west of the Cascades as a weak marine push moves in.

Scattered to widespread mostly wet thunderstorms will continue across the Southwest into the southern Great Basin, the southern/central Sierra, and Colorado Rockies, mostly along and east of the Divide. Scattered to widespread thunderstorms are likely along and south of a front stretching from Texas through the Southeast into the Mid-Atlantic Monday. Chances of thunderstorms exist for much of the central and eastern US except for portions of the northern Great Lakes and New England.
