## **Predictive Services Discussion:**

Westerly winds will become more widespread across the northern Intermountain West tomorrow as a cold front approaches the Pacific Northwest. Sustained winds of 12-25 mph and gusts 25-40 mph are likely across the Inland Northwest into northeast California, the northern Great Basin and northern Rockies amid relative of 10-25% and continued hot temperatures. In addition, abundant mid-level moisture from the monsoon will move north into many of these areas with isolated to scattered mixed wet and dry thunderstorms across the northern Intermountain West except for eastern Washington into portions of the Idaho Panhandle. The thunderstorms will be moving fast and capable of outflow winds exceeding 50 mph, with rainfall footprints small due to the fast storm motions. Due to the moisture, instability, and near-surface dry conditions, pyrocumulonimbus development is likely on any extremely active fires.

Improved conditions will continue west of the Cascade Crest due to onshore flow, with cooler temperatures and higher relative humidity. Scattered wet thunderstorms are likely farther south along the eastern Sierra into the central and southern Great Basin, Southwest, and southern Colorado. Drier air in Wyoming and northern Colorado will limit any thunderstorm development this afternoon. Widespread showers and thunderstorms will develop along a stalled front from the southeast Texas to the Mid-Atlantic coast, with scattered showers and thunderstorms developing from the Lower Great Lakes into the Northeast as well. Hot temperatures will continue across Interior Alaska today with minimum relative humidity of 25-40% and isolated afternoon thunderstorms.
