## Predictive Services Discussion:

Widespread westerly winds of $15-30 \mathrm{mph}$ with gusts of $25-45 \mathrm{mph}$ are expected from northeast California into the western half of Montana amid relative humidity of $8-25 \%$, resulting in elevated to critical fire weather conditions near and ahead of a cold front. Dry and breezy westerly flow will develop in the Cascade gaps and Columbia Basin behind the front, where temperatures will moderate considerably. Isolated to scattered mixed wet and dry thunderstorms will develop ahead of the front, from parts of the northern Great Basin into southwest and central Montana, in addition to western Wyoming. Look for gusty southerly winds amid dry and very hot conditions over the central and northern High Plains and Black Hills. Widespread High-risk significant fire potential will continue for the northern Intermountain West Thursday spreading into much of Wyoming, with extreme growth likely on existing or new large fires.

Scattered mainly wet thunderstorms will develop across the central and southern Great Basin into the Southwest and West Slope as moisture from the monsoon increases. Showers and thunderstorms will continue to be numerous along a stalled front from southeast Texas into the Southeast, with a few lingering showers and thunderstorms expected in the Mid-Atlantic and New England, as well.

National Predictive Services Outlook
