Predictive Services Discussion:

Hot, dry and breezy conditions will continue from eastern portions of southern California into northwest Arizona, central and southern Utah, the West Slope and far southern Wyoming today. Despite slightly lower winds as compared to Saturday, a second day of intense drying should lead to an overall increase in risks. Wind gusts of 25-40 mph will be common, and temperatures will be slightly above normal, with minimum relative humidity likely to drop to as low as 3-8% in the afternoon. Early morning moisture recovery will also be abysmal, except in sheltered valleys. Moderate to high-risk significant fire potential will continue, with emerging holdovers and growth to existing incidents likely. Scattered mixed wet and dry thunderstorms, along with a few dry thunderstorms, are expected over western Montana into much of Wyoming into far eastern Idaho. Temperatures over the northern Intermountain West will remain a bit below normal, but dry air will prevail. Dense wildfire smoke will maintain areas of low visibility and poor air quality across some of the northern Intermountain West, as well.

Monsoonal thunderstorms will generally be limited to southeast Arizona and portions of southern New Mexico. Most of the central and southern High Plains will see a drier and hotter day as high pressure aloft begins to strengthen over the region. Look for strong to severe thunderstorms in the northern and central Plains, with wet weather continuing over the Southeast. Aside from Florida, the rest of the East Coast into the eastern Great Lakes and Northeast will see dry and seasonably warm conditions. However, low pressure off the coast will bring showers and increasing winds to eastern New England late.
