Predictive Services Discussion:

Calmer conditions associated with surface high pressure building into Wyoming will bring a brief reprieve from critical fire weather conditions, though locally breezy weather will continue along parts of the West Slope, Front Range and eastern Great Basin. High pressure centered over western Wyoming will promote much lighter winds in the northern Rockies, with gusts generally remaining below 20 mph. Minimum relative humidity in the northern half of the western interior will reach as low as 15-25% and near 35% in the higher terrain. Most of the northern Intermountain West will see temperatures a few degrees below average, but warmer air will return to northern California and southwest Oregon as a ridge aloft begins to build over the area. Extremely dry air with minimum relative humidity from 5-15% will continue over southern California and the southern Great Basin, in addition to Colorado, with high temperatures as much as 5-15 degrees above normal. Winds will mostly be lighter than in previous days, but some gusts of 20-30 mph are possible off the Front Range. Scattered monsoonal thunderstorms will affect southern Arizona and New Mexico into the Texas mountains.

Record highs above 100 degrees will increase in coverage over the central and southern Great Plains, while relative humidity as low as 15-25% and southerly winds gusting from 25-35 mph will likely lead to an uptick in wildfire risk. Isolated gusty thunderstorms could pop up over the Texas and Oklahoma panhandles late. Showers and thunderstorms will be scattered across the northern Plains and Great Lakes into the Southeast, while wet weather will continue in parts of New England. Another outbreak of severe thunderstorms is forecast over western Iowa. Look for continued cool and showery weather in Alaska, with dry and locally breezy conditions over Hawai'i.
