Predictive Services Discussion:

Alaska will continue with above average temperatures, scattered showers, with some isolated thunderstorms possible, and low relative humidity. The Central Valley of California will see hot and dry conditions, with the relative humidity dropping to around 20%. The Mojave and Sonoran Deserts will remain hot with very low relative humidity. The greater Four Corners and the Intermountain West will warm temperatures and dry mostly dry conditions. Showers and isolated thunderstorms are possible. Gusty and dry southwesterly winds, to near 50 miles per hour are expected to create elevated to locally critical conditions across much of southern Nevada into west-central Utah, and into Wyoming. Isolated showers and thunderstorms are possible for the northern Rockies. The gusty wind will also be possible in the northern High Plains. The Southern and Central High Plains may also be gusty, hot, and dry. The southern Plains, into Texas, will see hot temperatures, allowing for a chance of showers and thunderstorms, as well as breezy conditions. From the Mississippi Valley eastward, hot and humid conditions are expected, especially in the south, along with scattered showers and thunderstorms.
