

Incident Management Situation Report
Friday, May 31, 2024 – 0730 MDT
National Preparedness Level 2

National Fire Activity:

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (98 fires)
New large incidents:	2
Large fires contained:	0
Uncontained large fires:	8
CIMTs committed:	2
NIMOs committed:	0

Nationally, there are three fires being managed under a strategy other than full suppression. Uncontained large fires include only fires being managed under a full suppression strategy.

[Understanding the IMSR](#)

[IMSR Map](#)

This report will be posted Monday through Friday at 0730 Mountain Time unless significant activity occurs.

Active Incident Resource Summary

Predictive Services Discussion:

Very warm and dry conditions will continue across the Southwest with minimum relative humidity of 5-15% followed by poor overnight recovery, mainly west of the Divide. However, higher relative humidity is likely on much of the southern High Plains, including eastern New Mexico, with isolated to scattered afternoon wet thunderstorms. A warming trend is forecast across the northern half of the West, with temperatures closer to normal except for above normal temperatures in much of interior California. Cooler temperatures are expected today across Florida behind a cold front, but drier air will move in with low afternoon relative humidity as low as 20%. Showers and thunderstorms will develop across much of the Mississippi Valley, with the most widespread and strongest storms producing locally heavy rain in the Lower to Mid-Mississippi Valley. Slightly above normal temperatures are forecast for much of the central and eastern Interior of Alaska, with isolated thunderstorms for much of the Interior as well.
