Predictive Services Discussion:

Well above normal, record-setting temperatures will continue in the Southwest, albeit slightly cooler than previous days, while much of central/northern California is several degrees cooler due to onshore flow. Minimum relative humidity will be 5-20% for much of the West, but it will increase to above 20% across portions of coastal California and the Inland Northwest, while minima of 15-30% occur on the Plains into the Mississippi Valley, Appalachians, and Great Lakes. A few showers will continue in western Washington, but breezy southwesterly winds of 12-20 mph gusting to 25-35 mph will develop ahead of a dry cold front across the Inland Northwest into northeast California, the Great Basin, Montana, and Wyoming creating areas of elevated conditions. Very isolated mixed wet and dry thunderstorms will develop across the Colorado Rockies into northern New Mexico.

Well above normal temperatures will spread onto much of the Plains, with locally breezy southerly winds of 15-20 mph on the southern High Plains. Breezy and dry northerly winds will occur in the Lower Mississippi and Tennessee Valleys, but winds will remain lighter in the Great Lakes. Hurricane Milton is expected to make landfall on the west coast of Florida overnight bringing strong winds, heavy rain with extensive inland flooding, and catastrophic storm surge near the coast.
