

**Incident Management Situation Report
Wednesday, October 23, 2024 – 0730 MDT
National Preparedness Level 3**

National Fire Activity:

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (121 fires)
New large incidents:	3
Large fires contained:	5
Uncontained large fires:	23
CIMTs committed:	7
NIMOs committed:	1

Nationally, there are 14 fires being managed under a strategy other than full suppression. Uncontained large fires include only fires being managed under a full suppression strategy.

[Understanding the IMSR](#)

[IMSR Map](#)

One fire suppression crew from Parks Canada and one fire suppression crew from Saskatchewan, Canada are supporting fire suppression efforts in the Great Basin Area.

Predictive Services Discussion:

A mainly dry cold front will move through the Appalachians to the East Coast during the day and overnight. Relative humidity will remain low for much of the central/east Texas and Oklahoma into the southern Appalachians and Southeast but will be slightly higher than previous days as minimums fall to 20-35%. Breezy northwesterly sustained winds of 12-20 mph are forecast behind the front in the Lower Great Lakes and Mid-Mississippi/Ohio Valleys, with lighter southwesterly winds ahead of the front in the southern Appalachians. In the West, upper-level ridging will build into the Southwest as temperatures rise to near 100°F in the Mojave and Sonoran Deserts amid relative humidity of 5-15%. Farther north, a fast-moving cold front will pass through the Inland Northwest, northern Great Basin, and northern Rockies. Widespread light precipitation is likely for eastern Oregon into southern and central Idaho, southwest Montana, and northwest Wyoming, although areas of wetting rain may be limited with snow levels of 6,000 to 7,000 feet. Breezy and dry southwesterly sustained winds of 15-20 mph gusting to 30 mph will develop ahead of the front in northern Nevada, as well.
