Predictive Services Discussion:

An upper-level ridge will shift east into the central Rockies, as a weak upper-level low moves out of the Pacific Northwest into the northern Rockies. This will shift the isolated mostly dry thunderstorms into the northern Great Basin and the Northern Rockies west of the Divide. Ignition efficiency will likely remain higher with new starts expected. Stronger winds behind the low will continue to spread farther northeast into the northern Great Basin, potentially extending towards western Montana, with southwest winds gusting 20 to 30 mph. Above normal temperatures will continue across the western US into the High Plains, with highs from Arizona to the Central Valley from 105 to 110 degrees, with 95 to 100 degrees expected in the Inland Northwest. The Northern and Central Plains will increasingly see more highs around 90 degrees. Low RH of 5 to 20% will persist for much of the Intermountain West with poor overnight recoveries of 15 to 30% for mid-slopes and ridges. The scattered monsoonal showers and thunderstorms from Southern California into New Mexico/southwest Colorado will continue with mixed wet/dry thunderstorms.

The eastern US will remain cooler than normal for Sunday behind the cold front. However, conditions will be dry with minimum RH of 20 to 30% in the Ohio and Tennessee Valleys. Winds will generally be lighter, though some gustier winds from Texas through the lower Mississippi Valley will continue.
