## **Predictive Services Discussion:**

A deep upper-level trough over the Pacific Ocean will start to near the Pacific Coast. This will start a pattern change that will continue through the end of the week. Ahead of this system, winds across the Intermountain West will continue to gust 20 to 30 mph through the afternoon. Latest model runs show Cascade Gap winds increasing ahead of the trough. RH across much of the West will remain low at 5 to 20%, though west of the Cascades humidity will start to increase substantially only dropping to 30 to 40%. The heat wave will continue through the Central Valley and into Arizona with highs remaining 100 to 110 degrees. The High Plains will continue to see above normal temperatures, with highs on the Northern Plains up into the mid to upper 90s. Some lingering monsoonal moisture caught under the ridge will keep some isolated to scattered mixed wet/dry showers and thunderstorm going around the Four Corners region. The cold front associated with the incoming trough will be moving through the Northwest overnight.

In the east with the low moving out of eastern Canada and the flat ridge in the west spreading farther east, expect the heat to spread across the Midwest and as far east as the Appalachians. RH will continue to be lower across the Southern Plains into the Ohio and Tennessee valleys from 20 to 30%. Winds in the High Plains to the Western Great Lakes will gust 20 to 30 mph, otherwise winds will generally remain light. Tropical Storm Francine in the western Gulf will remain over the Gulf, but stronger winds and increased rain will continue to impact the South Texas Coast.
