Predictive Services Discussion:

Widespread showers and isolated thunderstorms will develop in much of the western and northern Great Basin today, with wetting rain across much of northern Nevada into central Idaho. Strong southerly winds of 20-35 mph with gusts 35-50 mph are likely from the Lower Colorado River Valley and Utah into much of the central High Plains. Relative humidity will be lowest in the Lower Colorado Valley, with higher humidity in much of Arizona, New Mexico, and West Slope where scattered showers and thunderstorms will develop.

In the East, a low off the Southeast coast will move closer to the coast, possibly moving onshore in North Carolina, with strong easterly winds and heavy rain likely for the eastern Carolinas and Virginia. Well above normal temperatures and dry conditions will continue for much of the Midwest, west slopes of the Appalachians, and Northeast. Downsloping easterly winds of 10-15 mph will continue in the Upper Ohio Valley and west slopes of the Appalachians, with minimum relative humidity as low as 10% creating locally elevated conditions. Scattered showers and thunderstorms are likely to develop in portions of the Lower Mississippi valley, as well.
