## **Predictive Services Discussion:**

A large, and wavy frontal system will stretch from the eastern Great Lakes, and Ohio and Tennessee Valleys to the Mid-South. This system will bring widespread showers and thunderstorms to much of the central U.S. expanding eastward to include the central and southern Appalachian, Allegheny Plateau and western portions of the Mid-Atlantic toward evening. Dry conditions persist for much of the Southeast with isolated to scattered showers and thunderstorms for north Georgia and the Carolina Piedmont, especially Monday night. Across the Northeast, increased cloud cover with only patchy light rain along the New England coast. A much cooler and drier air mass will dominate the Upper Midwest and western Great Lakes with a chance of showers spreading into North Dakota as a new frontal system moves out of Canada.

In contrast to the active pattern for central and eastern parts of the nation, the first full day of fall will bring tranquil albeit warmer weather to much of the West from the Rockies westward. This as broad high pressure aloft centered near the Oregon coast strengthens and shifts farther inland. A weak disturbance will bring isolated rain showers to portions of western Washington and lingering moisture may lift into a few showers or thunderstorms over portions of Colorado and northern New Mexico. Above average temperatures to expand for the Inland Northwest and especially California while temperatures remain near average elsewhere in the West although coolness will linger for Colorado and New Mexico. Locally breezy, and dry north winds will persist in the Sacramento Valley while moderately gusty downslope winds develop along/east of the Divide in Montana and Wyoming.
