## **Predictive Services Discussion:**

Wetting rain develops and expands along and west of the Cascades in western Washington and much of western Oregon as a cold front, shifts inland through the day. Cooler temperatures, as much as 25 degrees cooler than yesterday, and higher RH will spread eastward across the Northwest. Scattered showers and isolated mainly afternoon/evening thunderstorms will develop eastward across portions of northern Washington and the Idaho Panhandle with isolated showers and thunderstorms as far south as the Blue Mountains in northeast Oregon.

Strong southwesterly winds of 15-30 mph with gusts 30-50 mph amid RH of 7-25% and above normal temperatures will develop ahead of the front across northeast California into the Columbia Basin, Inland Northwest and northern/western Great Basin creating elevated conditions. Additionally, strong southerly winds are likely on the northern High Plains with minimum RH of 10-25%. Moderate significant fire potential will remain for portions of the Sacramento Valley and northeast California, the Columbia Basin, and portions of the northern Plains where fuels are driest.

Elsewhere, as strong upper-level high pressure shifts eastward, dry and unseasonably warm weather expands across the Upper Midwest as well as the central and northern Great Plains. Dry and warm conditions will dominate the Rockies, Great Basin, California, and the Southwest. An increasingly wet pattern will impact much of the Southeast and eastern US, particularly the southern Appalachians, Georgia, and Alabama. This pattern will precede a land-falling hurricane later Thursday along the northeastern Gulf Coast.
