

**Incident Management Situation Report
Friday February 21, 2025 – 0730 MDT
National Preparedness Level 1**

National Fire Activity (February 14, 2025 – February 20, 2025):

Fire Activity and Teams Assigned	Totals
Initial attack activity:	Light (177 fires)
New large incidents:	1
Large fires contained:	3
Uncontained large fires:	0
CIMTs committed:	0
Type 1 IMTs committed:	0
NIMOs committed:	0

Nationally, there are zero fires being managed under a strategy other than full suppression. Uncontained large fires include only fires being managed under a full suppression strategy.

TOTAL FIRES:		157	31	16	11	3,514	230	3,959
TOTAL ACRES:		2,894	360	948	284	59,949	24,438	88,873

Ten Year Average	Quantity
Fires (2015 – 2024 as of today)	3,715
Acres (2015 – 2024 as of today)	72,837

Cumulative acres showing in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Mainly dry conditions are forecast in the eastern US from the Plains to the East Coast into mid-next week with a warming trend although a weak cold front may bring scattered rain and snow showers to the Great Lakes, Northeast, and Mid-Atlantic Monday into Tuesday. An atmospheric river will bring moderate to locally heavy precipitation to the Northwest and northern Rockies this weekend into early next week, with high snow levels of 6,000 to 8,000 feet, while the southern half of the West remains dry. Breezy downslope winds will develop near and east of the Divide in the Rockies and High Plains Monday into Tuesday, as well. Upper-level ridging will bring well above normal temperatures to the Greater Four Corner and Southwest mid to late next week, with very low afternoon relative humidity below 15% and poor overnight recovery west of the Divide. A fast-moving storm is likely to develop in the Midwest with light precipitation Thursday before moving off the East Coast next Friday. Periods of gusty easterly winds will develop over Interior and western Alaska for the next week while periods of precipitation are expected for portions of south-central Alaska, heaviest near the coast.
