Cumulative acres showing in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

## **Predictive Services Discussion:**

Strong northeasterly Santa Ana winds gusting to 70 mph amid relative humidity of 5-15% will continue through tonight across southern California, with winds more focused on Orange, Riverside, and San Diego Counties. High pressure off the coast will keep much of the West dry, with near to slightly below normal temperatures, although light snow is likely to continue in much of New Mexico. A strong winter storm will develop across the southern Plains today, with mixed precipitation, icing, and snow, mainly near and north of Austin and Dallas, Texas. The storm will progress into the Lower Mississippi Valley tonight, with snow spreading into much of Arkansas and the Tennessee Valley. Light snow will also extend along a cold front moving through the central and northern Plains today and into the Mid-Mississippi Valley and Great Lakes by tomorrow morning. Temperatures will remain below normal along much of the East Coast with dry conditions.
