Cumulative acres showing in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Northeasterly Santa Ana winds will continue across southern California into mid-afternoon, with peak gusts to 50 mph as relative humidity falls to near 10%. The winds are expected to weaken this evening, with light offshore flow and local gusts of 20 to 30 mph, while relative humidity recovery is better at 30-50%. Lighter lake-effect snow will continue downwind of the Great Lakes today, with more widespread snow developing across the area tonight as a weak warm front moves through. Weak low pressure in the western Gulf of Mexico will bring areas of light rain to the Texas and Louisiana coast, as well. Otherwise, dry weather is expected across the rest of the contiguous US, with breezy westerly winds across the northern Plains. Strong inversions are likely to continue across the Intermountain West under strong high pressure aloft. Low pressure in the Gulf of Alaska will continue to bring rain to the panhandle, with colder, near normal, temperatures forecast across the Interior.
