Cumulative acres showing in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

## **Predictive Services Discussion:**

Light offshore flow will be expected across southern California today, with a sea breeze and onshore flow developing late this afternoon into tonight with a sharp increase in relative humidity. Mild and dry conditions will continue across the Southwest but with light winds. A cold front will drop south out of Canada into the Northwest and northern Rockies during the afternoon and push south into the northern Great Basin and Wyoming overnight with light precipitation, mainly falling as snow. Milder temperatures are forecast across much of the Plains today, with locally breezy southerly winds on the central High Plains. A warm front will bring light snow to the central Appalachians, eastern Great Lakes, and Northeast today, as well, while seasonable temperatures return to the Southeast. A warming trend is forecast across much of Interior Alaska, while showers affect the Aleutians and light snow falls across southwest Alaska.
