Cumulative acres showing in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

Predictive Services Discussion:

Widespread showers continue across southern California, spreading into much of the Southwest and southern Great Basin, with snow levels as low as 4,000 feet. Breezy southwesterly will develop across eastern Arizona into New Mexico, while breezy and dry downslope winds spread across the northern and central Plains. A cold front will move through the Great Lakes and Northeast, with breezy westerly wind ahead of the front and scattered snow showers behind the front, most numerous downwind of the lakes. Scattered showers will spread from the Gulf Coast into the Southeast today, with generally light amounts. An Arctic cold front will move through Alaska, with heavy snow likely along the front and very cold temperatures behind the front. A cold front will approach Hawai'i bringing widespread showers and the possibility of a thunderstorm.
