Ten Year Average	Quantity
Fires (2015 – 2024 as of today)	7,100
<b>Acres</b> (2015 – 2024 as of today)	487,603

Cumulative acres showing in the Active Incident Resource Summary Table may not be reflected in the YTD statistics due to a lag in units completing YTD adjustments in the SIT/209 Application. Otherwise, changes in agency YTD fires and acres reflect more accurate mapping or reporting adjustments.

#### **Predictive Services Discussion:**

Widespread elevated to critical conditions are forecast today across much of the central and southern Plains into the western Mid-Mississippi Valley. South to southwest sustained winds of 15-30 mph with gusts 30-40 mph are forecast amid minimum relative humidity of 5-20%, lowest in the southern Plains. Breezy and dry northwesterly winds amid relative humidity of 15-30% will develop in the Southeast today, as well, but recent precipitation will mitigate conditions. However, elevated to critical conditions are expected across the southern half of Florida where little precipitation has fallen. A Pacific storm will continue moving through the Intermountain West, with the bulk of the precipitation from the Sierra through the Great Basin into the northern and central Rockies as heavy snow falls in the mountains. Breezy westerly winds are also likely in much of the Great Basin to the Southwest, west of the Divide, but high relative humidity and ongoing or recent precipitation will mitigate the conditions.
